

# ABSTRACT OF THE DISCLOSURE

5 A convenient and low cost computer security  
system deploys a menu of security tools within a  
local network that can be selected by a user  
connected to the network. A network architecture of  
the invention is structured to provide highly  
effective and flexible security features while  
greatly simplifying the user experience. Separate  
10 security service pathways provide different  
combinations of security service features and  
traffic from each user is directed to a pathway  
providing the desired features.
